EIBOS 2

All-in-one solution

Ergonomic solution for non-contact fundus visualization with its slim body in an all-in-one design with integrated inverter and focusing.

EIBOS 2

Superb ergonomics

"The integrated inverter of the EIBOS 2 from HAAG-STREIT SURGICAL gives an upright image all the time without having the need for an external inverter in the microscope stack. This is particularly useful for operating rooms where the scope is shared by both anterior and posterior segment surgeons."

INVERTER

Without much ado

EIBOS 2 uniquely features an integrated inverter which minimizes the height of the microscope. Covered with a sterile drape, it flips down for the operation or away when not needed. Operation is fast and easy as the microscope is immediately focused on the cornea when the EIBOS 2 is flipped out of its working position.

FOCUSING

Sharpness at your fingertips

Focus levers can be attached to both sides of the inverter body. The surgeon keeps surgical instruments in their hands and moves the lever with a fingertip. The focus shifts from the fundus to the upper vitreous body and back. If focusing is done by the assistant, round knobs may be used instead of the levers.

MOUNTING

Convenience & safety

The mounting system of the EIBOS 2 is designed such that the optical axis remains in the center of the visual field. The inverter body can be turned to either side and placed in any position which is most convenient for the surgeon. For the utmost safety it is suspended on a spring-loaded rail system.

RECONDITIONING

Sterile handling

Mounting ring, suspension, levers, knobs, and lens can be autoclaved as well as the silicone cover for the inverter. The cover slides easily onto the inverter body, and the lens with its bayonet snaps quickly and safely into position.

OPHTHALMOSCOPIC LENSES

Excellent optics

The EIBOS 2 is especially user-friendly and provides superb visualization of the peripheral vitreous body and retina. Two ophthalmoscopic lenses are available. Their high quality optics allows excellent vision to the edges of the visual field.

90 D AND SPXL LENSES

Your choice

Depending on personal preference or surgical conditions, choose between one of the two available sterilizable lenses or exchange them during surgery:

- 90 D: Ophthalmoscopic EIBOS 2 lens with 90 D for a 90° viewing angle
- SPXL: Ophthalmoscopic EIBOS 2 lens with 132 D for a 124° viewing angle

E.DL

At your disposal

As an alternative to the sterilizable lenses, disposable ones are also available. Prepared for instant use without reconditioning, the workflow is highly improved. This saves valuable time and money in the daily routine. The sterilized E.DL disposable lenses provide the clear vision of a brand-new unused ophthalmoscopic lens for every surgery and secure working conditions in terms of infections for every patient.
